WHAT IS PERMAWET?
A dual action wetting agent suitable for all potting mixes and soils that reduces water surface tension, aids rewetting and improves drainage.

POTTING MIX
KEY FEATURES & BENEFITS:

- An ideal additive to soilless potting mixes for long term rewetting
- Aids water distribution, retention and drainage
- Easy to use granular formulation - can be incorporated and top dressed
- Provides immediate and long term response
- Improves the efficiency of fertilisers and crop protection products such as fungicides
- Improved Cation Exchange Capacity (CEC) enhancing nutrient exchange following application
- Non-toxic to plants, making it safe to use on all crop types

WHERE TO USE:
PERMAWET can be incorporated into a wide range of potting mixes manufactured from bark fines, bark-fibre, peat, coco-fibre, pumice, or any other substrate.

WHEN TO USE:
PERMAWET can be used as an additive into a potting mix prior to containerisation or as a top dressing to containers of established plants.

HOW TO USE:

- Propagation and plug mixes - incorporate at the rate of 0.3kg/m²
- General potting mixes - incorporate at the rate of 0.75kg/m²
- Coco fibre based potting mixes - incorporate at the rate of 0.5kg/m²
- Bark based potting mixes - incorporate at the rate of 0.75kg/m²
- Peat based potting mixes - incorporate at the rate of 1.0kg/m²
- For all potting mixes - top dress at the rate of 1.0g/m²
- For potting mixes based on coco fibre - top dress at the rate of 0.5g/m²

BENEFITS:

- Long lasting effects after application
- Improves cation exchange capacity
- Safe and supplied in ready to use formulation
- Granular formulation for ease of application
- Non-toxic and environmentally safe

TURF & LANDSCAPE
KEY FEATURES & BENEFITS:

- An ideal water management tool in turf and landscape situations
- Prevents dry patch in turf and improves water percolation in wet soils
- Easy to use granular formulation which can be top dressed by spreader
- Provides immediate and long term response
- Improves the efficiency of fertilisers and crop protection products such as fungicides
- Non-toxic to plants and environmentally safe

WHERE TO USE:
PERMAWET is best applied as a top dressing to dry turf and watered in immediately with 5mm-8mm of irrigation. Repeat cycles of low water volume to maximise activity.

HOW TO USE:

- Greens and tees - top-dress at the rate of 1.5kg/100m² and reapply every 1-2 months.
- Fairways and sports fields - top-dress at the rate of 2.0kg/100m² and reapply every 2-3 months.
- Parks and reserves - top-dress at the rate of 1.5-2.0/100m² and reapply every 3 months or season long.
