

MP TERRAMAX®

7-3-9 + Water Saving Crystals + Biology

MP TERRAMAX protects newly laid turf with a blend of powerful organic carbon, unique traces, slow release UMAXX Nitrogen, critical soil nutrients and water crystals. Apply MP TERRAMAX to the topsoil surface immediately before laying turf to hold moisture in the rooting zone, enrich soil with high grade humates and Organic Carbon, maximise nutrient turnover, enhance cation exchange capacity and buffer soil against potential pollutants. MP TERRAMAX is biologically enhanced with over 20 species of microbes coated on the nutrients. This is known as our unique Eco Advance Premium Biology technology.
